

Advent Pharmaceuticals is an inhaled medicines pharmaceutical company that both develops and manufactures inhaled medicine delivery platforms for the global market. Advent engaged Wilkore to construct an office, laboratory and pilot scale, Grade C pharmaceutical manufacturing facility as an addition to the Small Technologies Cluster at Caribbean Business Park.

This project has historic significance for Wilkore, being the first project for which Wilkore used the Dagard Cleanroom Panel System. Imported from France, The Dagard Panelling system includes full glass doors, full-height double-glazed walls, pass-through hatches and automatic sliding doors. The cleanrooms and laboratory will in the future be available as an open access facility for pharmaceutical companies requiring small scale solid dose manufacture for Phase 2 and 3 Clinical Trials.

We worked very closely with Advent Pharmaceuticals on the design of this facility while managing both the construction of the facility, the installation of the Dagard Cleanroom Panel System and the customisation of the system for the building. We also assisted Advent with the final commissioning of the facility. Advent Pharmaceuticals were very particular to ensure that every aspect of the final sealing, detailing and cleaning was flawless. We were able to meet their every need, and this facility has become a showcase of the Small Technologies Cluster.”

CLIENT

Advent Pharmaceuticals

PROJECT VALUE

\$1.5M

COMPLETION DATE

Late 2005

LOCATION

Caribbean Business Park, VIC

REFEREE

Nicholas Jolley
