

In July 2004 Wilkore finished construction on one of the largest Automated Container Storage (ACS) systems in the world for Kent Removal and Storage in Sydney. Alongside the ACS space, the facility includes office and warehouse space. A challenging site, Wilkore designed, constructed and commissioned the facility to meet Kent's logistic needs.

The facility has the capacity to store 1,200 full-size shipping containers. ACS systems are designed for speed, reliability, efficiency and to maximise the available storage volume at the location. Using the computer-operated 'Plan Ahead Position' system, containers are handled with reduced timeframes and labor costs.

The outstanding results of this project are a testament to Wilkore's commitment to technological innovation.

CLIENT

Kent Removal & Storage

PROJECT VALUE

\$10M

COMPLETION DATE

Completed July 2004

LOCATION

Villawood, NSW

PROJECT MANAGER

Paul Spencer

SITE MANAGER

Travers Bulgin

REFEREE

Graham Kent
