

Sigma Pharmaceuticals Ltd is a leading Australian manufacturer of prescription, OTC and generic pharmaceuticals. Sigma engaged Wilkore to consolidate three external sites onto an existing, operation site. Construction began in early 2005.

An additional 18,000m² of floor space was added to the site, including new cleanroom manufacturing, office, warehouse and amenity space, as well as a new purified water system, mixing vessels, blenders, CIP equipment, downflow booths and filling and packing equipment.

Wilkore was the construction manager for the project; controlling and coordinating all aspects of the design, procurement, construction and commissioning. The facility was built within an operational site and as such, communication with the client was paramount during the project execution. We worked very closely with the client who were intimately involved at every stage. At an early stage we committed to a Guaranteed Maximum Price for the project.

We delivered a fully compliant, state of the art facility to this budget and to the required timeframe. Sigma was able to maintain full production within their existing facilities on-site and was able to seamlessly integrate over 100 new products into the new facilities as they became available.
